

## POWDER DIFFRACTON NEWS

Nicole M. Ernst, M.L.I.S., ICDD, Newtown Square, PA 19073

ICDD's quarterly international journal, *Powder Diffraction*, focuses on materials characterization employing X-ray powder diffraction and related techniques. This year, there will be an additional supplemental issue focusing on the Latin American Workshop on Applications of Powder Diffraction and Mini-Course on Methods of Powder Diffraction held April 16<sup>th</sup> – 20<sup>th</sup> 2007 in Campinas, Brazil. This is in keeping with the international scope of the journal. In addition, there is more interest in the online version of our journal, which is convenient to students, faculty, and other professionals alike. There are also several who opt to have both online and print subscriptions. This as well as this past year's top articles and related statistics are reviewed. Finally, PeerXPress, an online peer-review and editorial-management service is reviewed.
