

Industrial Application of XRD

Bryan Wheaton, Corning Incorporated, Painted Post, NY

Phase and microstructure understanding of materials at various length scales from bulk to the nanoscale is necessary to improve properties of materials. This talk will discuss characterization of materials in an industrial setting to further the understanding and improvement of thermal, optical and mechanical properties. Applications of XRD, both powder and high temperature, combined with additional characterization techniques will be discussed, with specific applications for ceramic and glass-ceramic materials.
