WORKSHOP Monday (FULL DAY)

8:30AM – 5:00PM

Quantitative Phase Analysis by XRPD

Organizer & Instructors:

Arnt Kern*, Bruker AXS GmbH, Karlsruhe, Germany, arnt.kern@bruker-axs.de

Detlef Beckers, PANalytical, Almelo, The Netherlands, detlef.beckers@panalytical.com

Fabia Gozzo, Excelsus Structural Solutions SPRL, Brussels, Belgium, fabia.gozzo@excels.us

Robert Dinnebier, Max-Planck Institute für Festkoerperforschung, Stuttgart, Germany, r.dinnebier@fkf.mpg.de

Arnaud Grandeury, Novartis Pharma AG, Basel, Switzerland, arnaud.grandeury@novartis.com

This workshop will discuss the basis of quantitative phase analysis (QPA) for both single peak and whole pattern approaches. The focus will be on how to select and apply these methods, particularly in the context of the derivation of absolute phase abundances. The presence of poorly crystalline or amorphous content requires extension of the basic methods, but, once these are established, they can be shown to produce QPA to the similar lower limits of detection and accuracy as for crystalline phases.
